

# InSpire Static UI Walkthrough

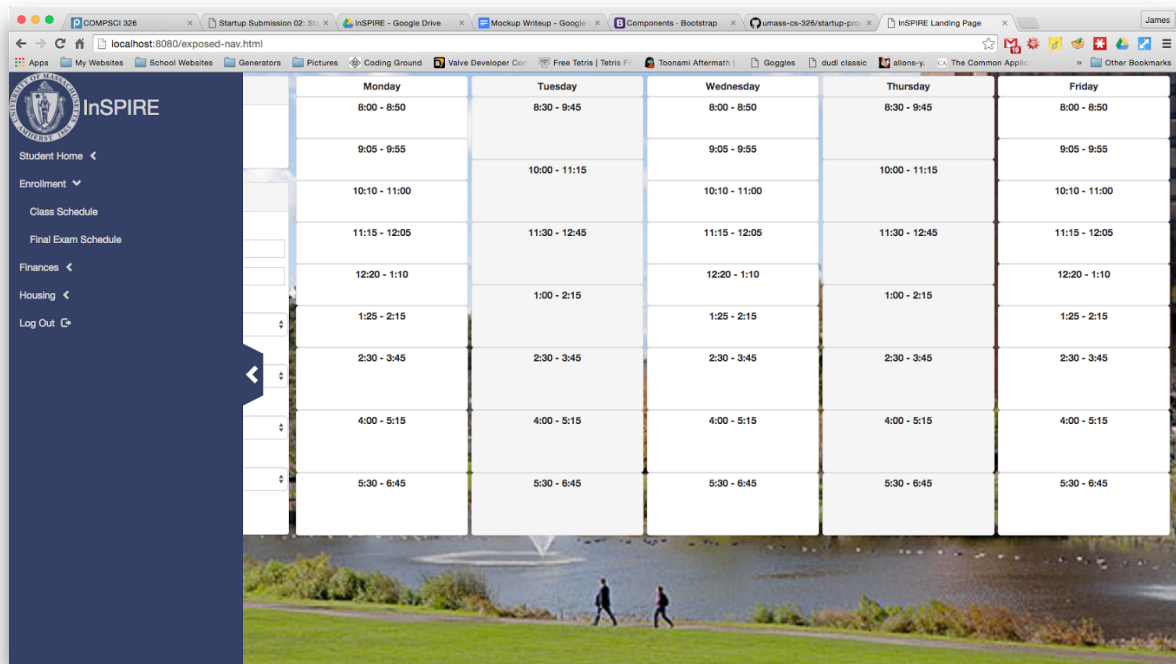

Nicholas Merlino - Michael Gallant - Stephen Palagi - James Morris - Josh Silva - Kevin Chan

## Part 1 - Landing Page

The landing page - when the user has no enrolled classes - is the view below (if there are enrolled classes, go to part 5). This (or part 5) is what a user will see upon logging in. The idea is that as a scheduler, the most important part of InSpire is the visualization of an user's schedule and its utilization. Guided by that motivation, we wanted to make adding classes extremely simple. Instead of having two separate pages, the ability to search is provided immediately as well as a way to visualize the scheduling process. Once you fill out the fields in the search pane, it leads you to view/part 3. In addition, there is a minor widget for viewing notices or action tasks for an user. This is elaborated in view/part 6.

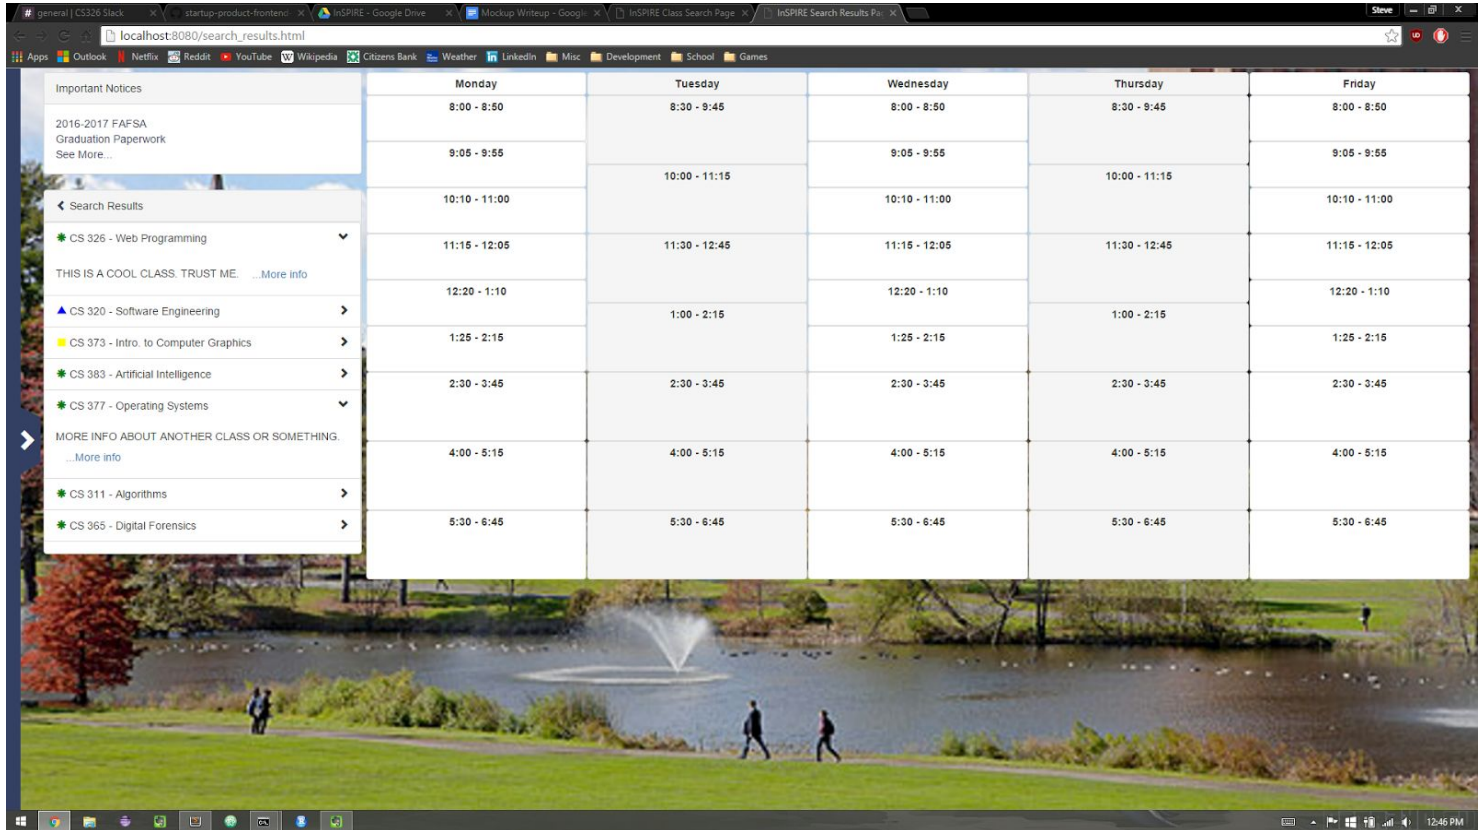

## Part 2 - Exposed Navigation Bar

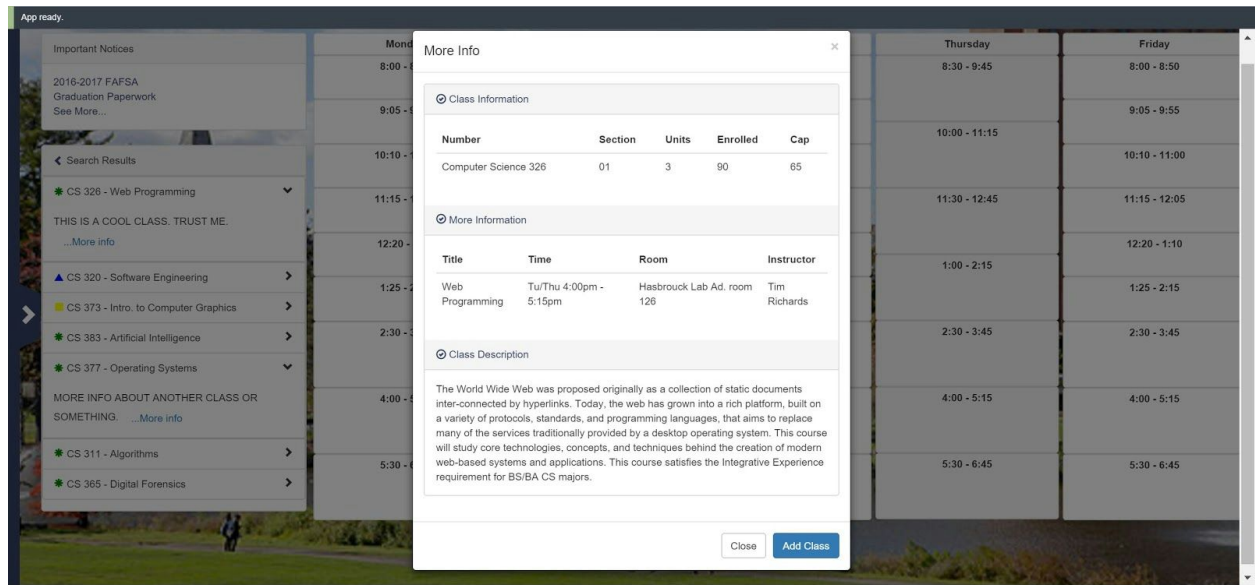

The navbar can be accessed by clicking the chevron on the left side of the screen. After sliding out, it presents the user with a series of drop-down menus to navigate InSPIRE with. The Enrollment section allows users to access their class schedule and final exam schedule. This element also includes a logout link.

**Part 3 - Searching for a Class** - After filling out the class search pane located on the home page and clicking 'search', you will see the following:

The class search pane will be replaced with results based on the search criteria filled out by the user. Each class is listed in a small contained rectangle that has the option to be expanded. Upon expansion, the class's respective block will get larger and display more information about the class such as a short description, session times, professor, etc... with the option for more information to be displayed if the user wants. At any time the user can click the back arrow at the top of the results pane to return to the search form.

**Part 4 - Detailed Class Information** - This view can be accessed by clicking on either the '..More Info' link located in the search results pane or by clicking on an added class located in the class schedule pane once the class has been added. Clicking on either of these will make a modal appear:

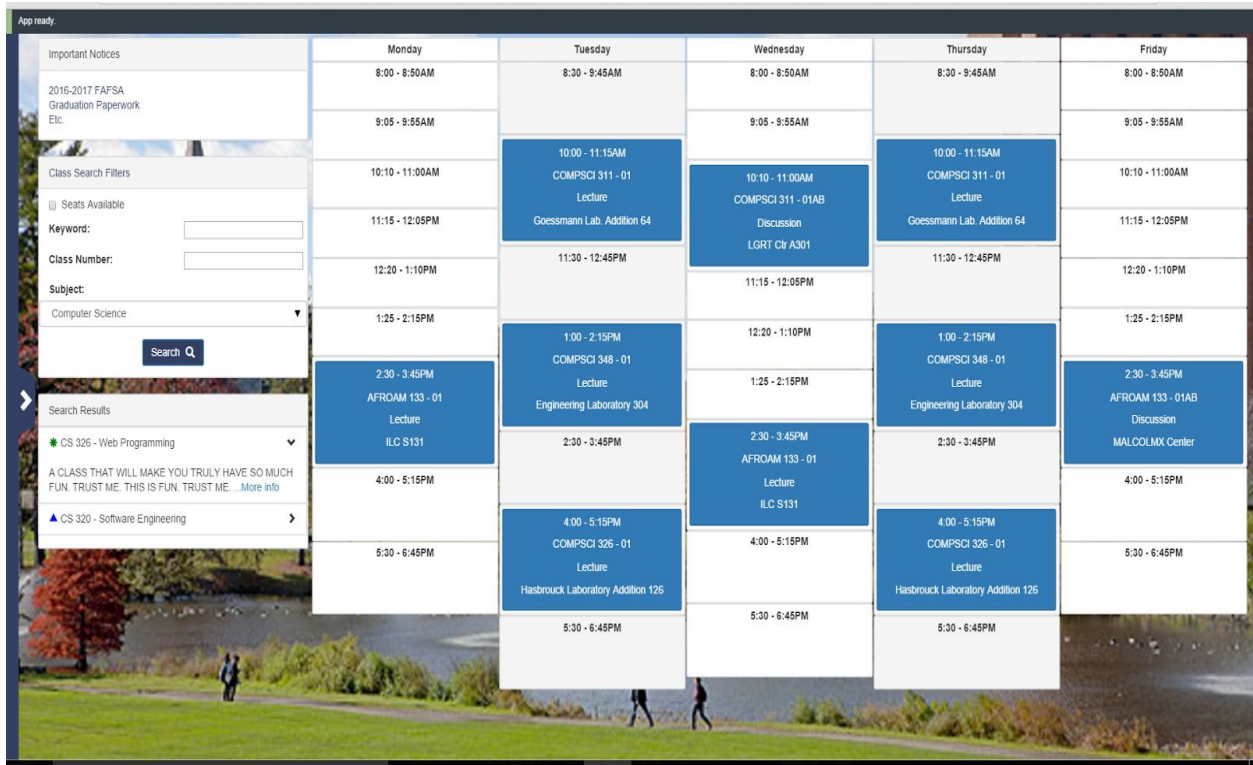

This modal contains all relevant information about the selected class in an easy-to-read manner. At any time this view can be closed by clicking the close button located at the bottom of the modal or by clicking anywhere on the dimmed part of the screen.

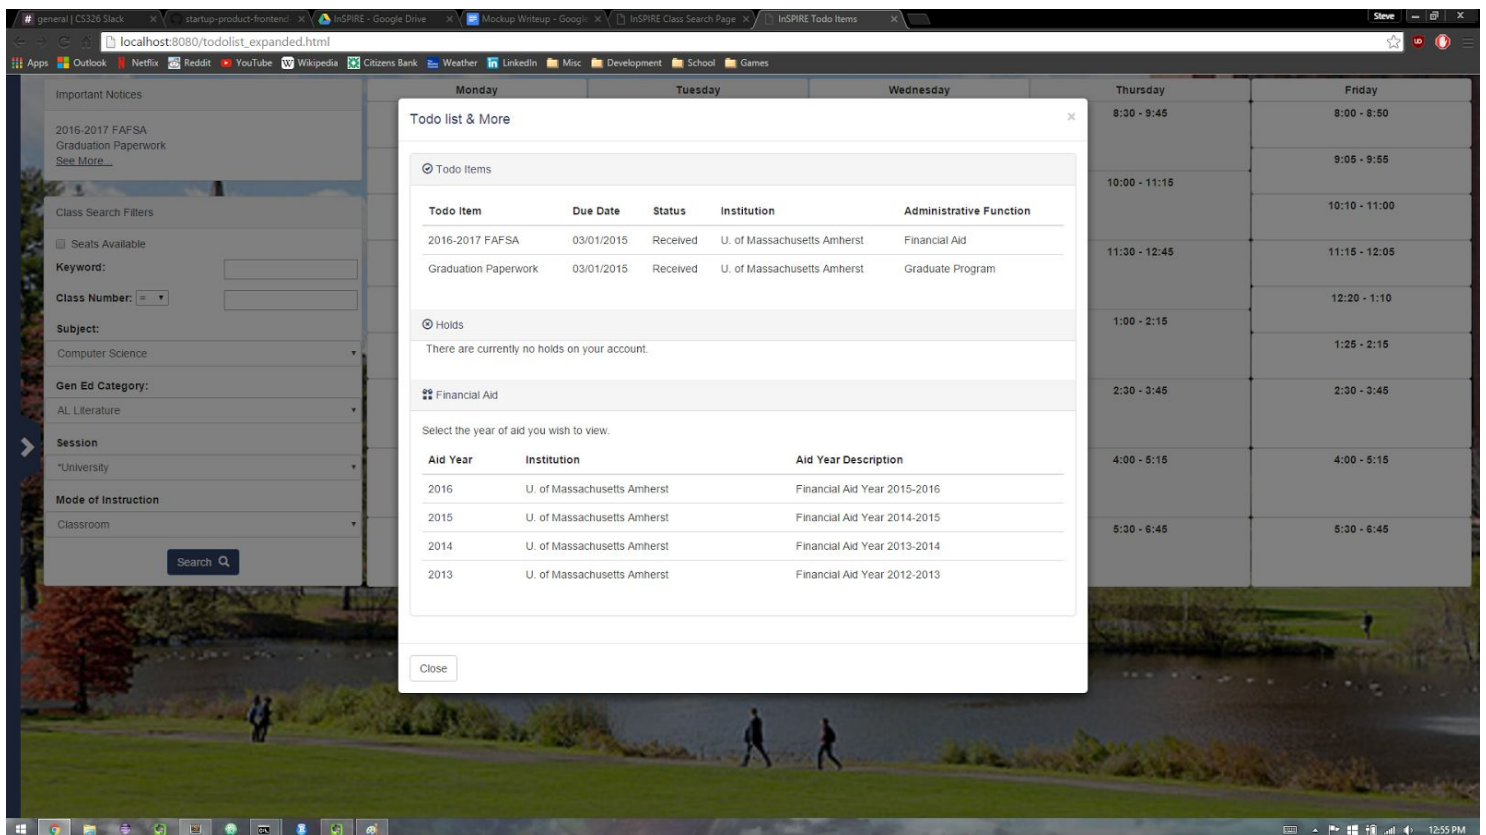

## Part 5 - Full Class Schedule

After adding classes to your schedule from the search feature this is the resulting view. This view fills in the relevant portions of the schedule on the right of the landing page. More specifically it displays basic class information such as sections, and locations. Each individual item will also function as a button that will open up a modal for additional information on the class as well as the option to remove it from your schedule.

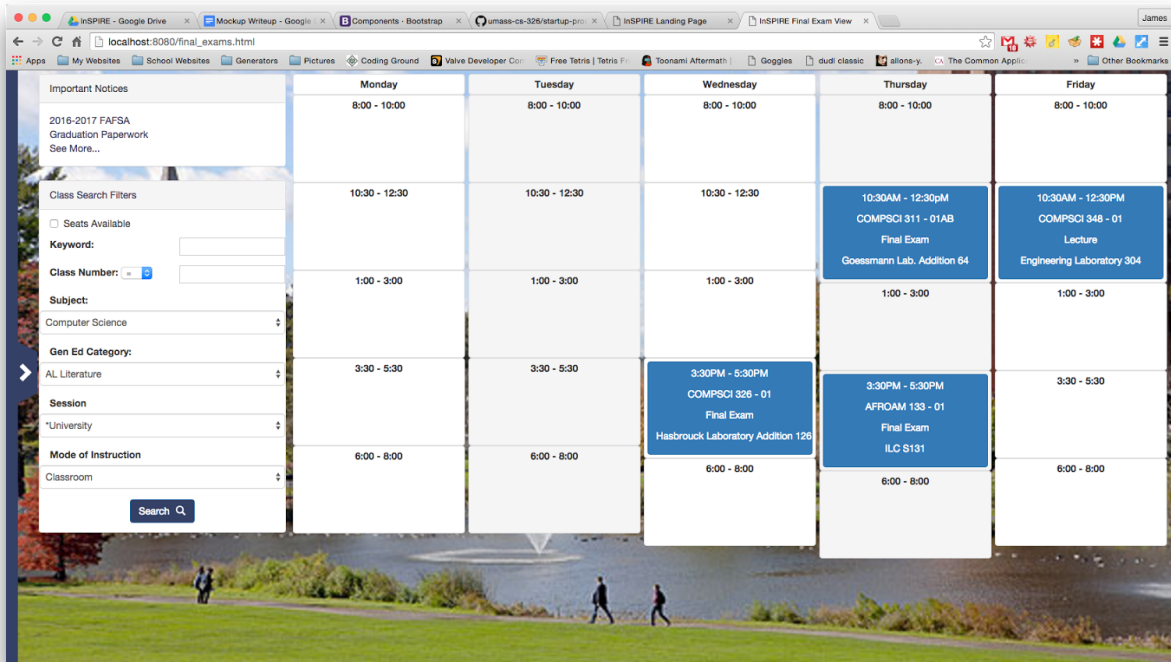

Part 6 - Todo List & More - This view can be accessed by clicking the 'See More...' link locate at the bottom of the Important Notices pane on the landing page. Clicking this link makes a modal appear:

This modal contains the user's InSpire todo items, holds on their account, and relevant financial aid information. At any time this view can be closed by clicking the close button located at the bottom of the modal or by clicking anywhere on the dimmed part of the screen.

## Part 7 - Final Exam View

Similar to the full class schedule, the final exam view shows the user when final exams take place. This can be accessed via the navbar by clicking on “Enrollment” and then “Final Exam Schedule”. The classes do not feature modal windows as they only serve to show when and where exams are.

## Contributions

### Stephen Palagi

- Created search and search results pane
- Created the expanded todo list modal
- Collaborated with Kevin to create the collapsed side navbar artifact

### Kevin Chan

- Created landing page (Everything except the search panel)
- Designed the layout of the application
- Collaborated with Stephen to create the collapsed side navbar artifact

### Nick Merlino

Created modal windows for the “more info” detailed class information

**Joshua Silvia**

Created link functionality from class schedule to modal windows

**James Morris**

Created the look of the exposed navbar

Created Final Exam view with exams

**Michael Gallant**

Created the Schedule view with added classes
